Clearpath — Product Guide

Overview

Clearpath is a cloud-based project management and team collaboration platform designed for modern software teams. Founded in 2021, Clearpath helps organizations streamline their workflows, track project progress, and improve team communication through an intuitive, feature-rich interface.

Clearpath serves over 15,000 organizations worldwide, ranging from startups to Fortune 500 companies. The platform is available as a web application, desktop app (Windows and macOS), and mobile app (iOS and Android).

Core Features

Task Management: Create, assign, and track tasks with customizable statuses, priorities, and due dates. Tasks support rich text descriptions, file attachments up to 50MB, checklists, and comment threads. You can create task dependencies and visualize them in Gantt chart view.

Sprint Planning: Organize work into sprints with capacity planning tools. The sprint board supports drag-and-drop task management, swim lanes by assignee or priority, and burndown charts that update in real-time.

Team Workspaces: Each workspace can contain multiple projects. Workspaces support role-based access control with four roles: Owner, Admin, Member, and Viewer. Owners can configure workspace-level settings, billing, and integrations.

Real-Time Collaboration: Clearpath features real-time document editing, live cursors, comment threads with @mentions, and activity feeds. Changes sync instantly across all connected clients via WebSocket connections.

Reporting Dashboard: Built-in analytics with velocity tracking, cycle time analysis, team workload distribution, and custom report builder. Reports can be exported as PDF or CSV and scheduled for weekly email delivery.

Integrations

Clearpath integrates with popular development tools including GitHub, GitLab, Bitbucket, Jira (one-way import), Slack, Microsoft Teams, Google Drive, Dropbox, and Figma. The GitHub integration supports automatic task status updates based on pull request events and commit messages.

API access is available on all paid plans. The REST API supports all platform operations, and a GraphQL API is available in beta. API rate limits are 1,000 requests per minute for Pro plans and 5,000 for Enterprise plans. Webhook support allows real-time event notifications to external services.

Security & Compliance

All data is encrypted at rest using AES-256 and in transit using TLS 1.3. Clearpath is SOC 2 Type II certified and GDPR compliant. Enterprise plans include SSO via SAML 2.0, SCIM user provisioning, audit logs with 365-day retention, and IP allowlisting.

Two-factor authentication (2FA) is available for all accounts and can be enforced at the workspace level by admins. Session management allows users to view and revoke active sessions. Data residency options are available for EU and US regions on Enterprise plans.

Mobile App

The Clearpath mobile app is available for iOS 15+ and Android 12+. It supports offline mode for viewing and editing tasks, which sync automatically when connectivity is restored. Push notifications can be configured per-project for task assignments, mentions, and status changes.

The mobile app supports biometric authentication (Face ID, Touch ID, fingerprint) and integrates with the device's calendar for due date reminders. Photo attachments can be added directly from the device camera.
